BEWARE OF ICE DAMS!

## ICE DAM REMOVAL

We provide *Ice Dam Removal* in the winter months to help prevent water damage to your roof and other important elements of your home's structure.

Rising heat from inside your house, fluctuating temperatures, poor ventilation, and poor insulation cause snow and ice on your rooftop to melt and run down to the eaves of the roofline. Because there is no heat at these eaves, the water freezes. Any additional melting can cause a back up of water that can penetrate underneath your shingles and leak inside your roof, walls and ceilings.

Keeping snow and ice off your roof prevents damage and promotes cost savings. By using a specialized steam pressure washing system, we can eliminate potential problems common to homes in Minnesota.
